FIRE BLANKETS

The vast majority of domestic fires occur as a result of cooking. Stove and oven fires can quickly escalate out of control, putting both life and property in serious danger. It is highly recommended to always have stored, a Fire Blanket that is close to hand in the case of an emergency. Fire Blankets are particularly useful for smothering cooking oil fires, fat pan fires or for wrapping around a person whose clothing is on fire. When completely covering the fire, the Fire Blanket will starve oxygen supply to the fire helping to extinguish it. All Blankets are Australian Standards approved.

EXTINGUISHING AGENTS

Without the appropriate extinguishing agent, a fire extinguisher can be ineffective in putting out a fire. Specific extinguishing agents are suited to each class of fire. Keeping this in mind when selecting a fire extinguisher for your location is highly important. To identify which class of fire an extinguisher is made for, you'll find a color-coded box indicating the type of extinguishing agent it contains. Our Firex range of extinguishing agents includes bulk wet chemical, bulk dry chemical powder, AFFF bulk concentrates and more.
